

Allowing SAVI Technologies to use RFID devices between 425 & 435 MHZ will cause interference to the amateur radio service. This portion of the spectrum was set aside for non-commercial use and the SAVI proposal will violate that intent. Since the amateur radio spectrum is for the training of technically qualified individuals who may be used by the military in time of war this will also jeopardize the intent of the reserved spectrum for that purpose. To hobble the already underbudgeted military is very un-American and borders on a subtle form of terrorism.
